

Abner Lima

Software Engineer | Distributed Systems | .NET | Golang | AWS

abner.lima27@outlook.com

PROFESSIONAL RESUME

Software Engineer with solid experience writing high performance and scalable systems for the financial market. Special interest in event-driven architecture and microservices.

TECH STACK

Backend: .NET (C#), Golang, REST APIs, gRPC, Worker Services.

Architecture/Messaging: Microservices, Event-Driven Architecture, Messaging queue (AWS SQS, RabbitMQ).

Cloud: Docker, Kubernetes, AWS (EC2, ECS, EKS, S3, CloudFormation), CI/CD (Azure DevOps).

Database: SQL Server, PostgreSQL (Query optimization, indexing and performance).

Frontend Web/Apps: Next.js, Native Android (Kotlin).

EDUCATION

Federal University of Ceará, Fortaleza, Brasil — *Bachelor Degree*

January 2017 - September 2021

Computer Science bachelor degree

EXPERIENCE

BTG Pactual Investment Bank, Full Stack Engineer

October 2020 - July 2026 (São Paulo - Remote)

- Responsible of creating *financial calculus engine* for Portfolio Management (P&L, Funding, Present Value);
- Writing critical systems for the bank with focus on *high availability* and *distributed processing*;
- Communication between systems using *AWS SQS/RabbitMQ* and microservices (*REST APIs, Worker Services*);
- Utilization of scalable resources in AWS like *ECS, EKS and CloudFormation*;
- Optimization of complex business rules to facilitate high volume processing without degrading performance.

Mobills, Android Intern

August 2019 - December 2019 (Fortaleza)

- Android app development using Kotlin and Firebase services.

RELEVANT PROJECTS

Precatory (Brasil/Colômbia) and Consortium: Writing financial calculus systems to calculate P&L and Exposure (*+200k assets*). Focused in total data precision and integration with other systems.

NPL: High volume data integration. Applied parallelization strategies and pre-processing data to assure system efficiency.
